ON THE **COVER**

This month's cover highlights two of the articles in the issue. First, the name tag shows a new Perl special variable, `%+`, used for named captures in the new Perl 5.10 regex engine, covered in "Named Captures in Perl 5.9.5". The CD case comes up in "Making my own CPAN", which shows you how to make your own version of CPAN and put it on removable media. This is also a new cover design to go along with the complete redesign of the magazine, now packed with even more Perl.
